Publication Date:	02-Sep-2024

Commitment to achieving Net Zero

Limited is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2023

Additional Details relating to the Baseline Emissions calculations.

Scopus Asbestos Compliance are focussed in analysing of suspected materials for asbestos and carrying out asbestos surveys to Four-Stage Clearance Procedures according to UK's legislation.

Scopus Asbestos Compliance Ltd was formed with the sole intention of offering single-source expertise and education to make asbestos compliance easy. UKAS accredited to ISO17025, Scopus boasts a highly experienced team of asbestos experts supported by its lab testing for asbestos and bespoke data capture technology, ensuring an efficient and effective service as standard.

This is the first presentation of the Carbon Reduction Plan, according to the first calculation of the carbon footprint. In consequence, the values of the baseline year coincide with the actual period presented.

Baseline Year: 2023	
EMISSIONS	TOTAL (tCO2e)
Scope 1	21.09
Scope 2	3.21
Scope 3 (Included Sources)	1.36 – Employees' commuting 6.26 – Business travels
Total Emissions	31.47

Current Emissions Reporting

Baseline Year: 2023	
EMISSIONS	TOTAL (tCO2e)
Scope 1	21.09
Scope 2	3.21
Scope 3 (Included Sources)	1.36 – Employees’ commuting 6.26 – Business travels
Total Emissions	31.47

Emissions reduction targets

In order to continue our progress toward achieving Net Zero, we have adopted the following carbon reduction targets:

- 100% Electric vehicles
- Avoid business travel as much as possible.

We project that carbon emissions (if the company structure stays similar) will decrease over the next 6 years to 16.99 tCO2e by 2030. This is a reduction of 46% respect the baseline year.

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

As stated before, in order to achieve GHGs emissions reduction, Scopus is already implementing the most relevant solutions for their business sector. As the remaining emissions are associated with electric consumption, the rest of the carbon footprint would be reduced in accordance with the changes in the national generating system to a greener grid. It is expected that UK’s energy grid will integrate more and more the use of renewable energies, therefore leading to a reduction in Scopus’ indirect emissions. In any case, Scopus compromises itself to look for alternative solutions if the electricity and/or services providers fail in their own carbon neutral plans, in order to achieve its own carbon neutrality.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans. Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
